FULLCOURT

Full System Flow

Admin-controlled competition. Coach-managed rosters. Staff Admin courtside scoring. Public access without player accounts.

Prepared for Ka-DAYO basketball operations - November readiness edition

01 - SYSTEM OVERVIEW

One connected tournament flow

FullCourt uses three authenticated operational roles. Players, parents, and spectators use the public Game Center and Schedule without creating an account.

Admin creates tournament

Coach registers team

Admin verifies readiness

Bracket and schedule

Staff Admin scores game

Admin confirms result

Bracket and standings update

Public sees result

Role boundaries

Admin: tournament, eligibility, payments, bracket, schedule, assignments, and final confirmation.
Coach: team registration, roster, private documents, payments, and schedule awareness.
Staff Admin: assigned games, team score, individual points, optional statistics, and final-score submission.
Public/player: Game Center, schedule, bracket, standings, and published results only.

Privacy rule

Birth records, parent permits, exact birth dates, addresses, contact details, payment receipts, and review notes remain restricted. Only approved competition information appears publicly.

02 - ADMIN FLOW

Admin runs the competition

The Admin creates tournaments directly. There is no organization approval layer and no Submit for Admin Review flow.

1. Create tournament

Enter the tournament name, start date, division or category, registration fee, rules, description, game venue, Main Court, available days, and playing hours. Saving publishes the tournament for Coach discovery.

2. Review team readiness

Monitor registered teams, roster size, eligibility progress, payment balance, and missing requirements from one administrative workspace.

3. Verify player eligibility

Compare the Coach-declared birth date with the Birth Certificate or PSA. A mismatch is automatically flagged and verification is blocked until Admin review. Review the parent permit and age-category qualification.

4. Verify payments

Approve or reject full and partial GCash/Maya submissions. The ledger shows registration fee, approved total, remaining balance, pending installment, and fully-paid status. Overpayment and duplicate pending receipts are blocked.

5. Build competition

Generate the bracket, create the schedule from court availability, then manually adjust game date, time, court, venue, or order when operations require it.

6. Assign and finalize

Assign a Staff Admin to each active game. After scoring, review the submitted final score and confirm it before the bracket, standings, next matchup, and public result become official.

03 - COACH FLOW

Coach owns the team and roster

The Coach is the only authenticated team-side user. Players do not receive invitations or maintain separate accounts.

1. Register and discover

Verify the Coach email, sign in, browse upcoming tournaments, select the correct division, and register the team.

2. Build the roster

Add each player's full name, birth date, jersey number, position, and guardian name/contact when the player is a minor.

3. Submit private documents

Upload the Birth Certificate or PSA and parent permit. The Coach can see pending, verified, rejected, DOB mismatch, and age-qualified statuses without exposing private files publicly.

4. Pay by full or installment

Submit the payment reference and receipt. A Coach may pay the full balance or a partial installment, then track the approved amount, remaining balance, review status, and rejection reason.

5. Prepare for games

View the bracket, standings, team win-loss record, upcoming games, venue, and court. Schedule or venue changes generate notifications for affected Coaches.

04 - STAFF ADMIN FLOW

Simple, fast courtside scoring

The courtside interface prioritizes the information required by the stakeholder: official team score and individual player points.

Before tip-off

Open the assigned game, confirm both teams and present players, verify the starting lineup when used, and prepare the game period and clock.

Required scoring

Select the scorer, then record 2-point, 3-point, or free-throw makes and misses. Made baskets automatically update both the team score and the player's individual points.

Optional More stats

Rebounds, assists, steals, blocks, turnovers, and fouls stay inside a collapsed optional section. This keeps the main scoring surface fast while supporting richer statistics when staffing allows.

Final score submission

At the end of the game, Staff Admin submits the final score for Admin confirmation. The result is not treated as official until that confirmation is complete.

Player of the Game

The system recommends the highest individual points scorer from the finalized box score. Rebounds, assists, and defensive statistics break ties. Admin can review the recommendation before publishing.

05 - PUBLIC AND NOTIFICATION FLOW

Players follow the competition without an account

The public experience stays easy to access while private operational records remain protected.

Game Center and daily schedule Tournament details and venue Bracket and standings Live and final scores Published awards and Player of the Game	Team registration updates Eligibility review or mismatch Payment approval or rejection Bracket publication Game date, time, venue, or court change Official game result

Automatic updates after confirmation

Confirming a final result updates the public score, team records, standings, bracket progression, next matchup, analytics, and share-card data from the same official record.

06 - NOVEMBER GAME-DAY READINESS

Operate safely even when connectivity fails

Use the local XAMPP fallback, offline exports, and paper records as part of the operating plan rather than waiting for an incident.

One week before

Test the real Admin, Coach, and Staff Admin devices. Finish rosters, eligibility, payments, bracket, courts, and schedules. Export offline copies and assign a backup Staff Admin.

Before the first game

Run the FullCourt readiness checker. Verify Game Center, today's schedule, the scoring console, and a second-device public score display. Record and remove one test basket.

During games

Keep an official paper score sheet. If connectivity fails, continue on paper and enter missing records when service returns. Make schedule changes inside FullCourt so affected Coaches receive notifications.

After every game

Confirm the score, review Player of the Game, check the public result, bracket, and standings, and retain the signed paper score sheet for audit.

End of day

Export scores, schedule, standings, payments, and eligibility status. Keep database backups in two separate storage locations and log every correction.

FINAL OPERATING PRINCIPLE

Admin controls the competition. Coach controls the roster. Staff Admin controls courtside scoring. Players and spectators follow the action publicly.
