KADAYO STAKEHOLDER-ALIGNED BASKETBALL OPERATIONS

FULLCOURT
COMPLETE SYSTEM FLOW

Administrator | Coach | Staff Admin | Public Game Center

Players are roster records managed by Coaches. They do not need individual accounts.

3 authenticated roles	**15-player roster cap**	**Public scores & schedule**

Prepared for system defense and November game-day operations

01 / PRE-TOURNAMENT

From setup to a publishable schedule

The Administrator controls competition structure. The Coach owns roster data. FullCourt blocks unsafe schedules before publication.

1

Administrator creates the tournament

Set tournament details, divisions, dates, roster deadline, rules, and the playable venue with its Main Court.

2

Teams and Coaches are connected

Administrator manages team oversight. Each team is associated with the Coach who owns its roster actions.

3

Coach completes the 15-player roster

Add player records without creating player accounts. Record birth date, guardian, jersey, and position; then upload PSA/Birth Certificate and Parent Permit.

4

Administrator reviews eligibility

Review protected files and the birth-date match. Approve or reject with remarks; roster fields remain Coach-owned.

5

Bracket and schedule are generated

Schedule Optimization checks court overlap, team overlap, venue availability, team rest, and daily game limits.

6

Administrator publishes

Publication makes games visible in Game Center and notifies affected Coaches. Conflicts must be zero before publishing.

02 / GAME DAY

From assignment to official result

Staff Admin records the game. Administrator confirms the result. Coaches receive operational changes and the official score.

1

Staff Admin accepts the assignment

Only assigned and accepted games open in the protected scoring workspace.

2

Lineups are confirmed

Eligible and present roster players are selected before individual scoring events are recorded.

3

Live score and player points are recorded

Use +1, +2, and +3 actions. Rebounds, assists, steals, blocks, turnovers, and fouls remain optional. Event UUIDs and Undo protect against duplicate or incorrect taps.

4

Staff Admin submits the final

The score is reviewed, the clock stops, and scoring locks in awaiting-confirmation state.

5

Administrator confirms

FullCourt rejects ties, wrong winners, and stale score snapshots. A valid confirmation publishes the result, recomputes standings, and advances the bracket.

6

Coaches and public views update

Both Coaches receive the official-result alert. Game Center, bracket, standings, reports, and share cards use the official score.

03 / RESPONSIBILITY MATRIX

One owner for every critical action

AREA	ADMINISTRATOR	COACH	STAFF ADMIN	PUBLIC / PLAYER
Tournament	Create and manage	View	Assigned games	Published view
Team / roster	Oversight	Manage up to 15	Lineup use only	No account
Documents	Review / decide	Upload / correct	No access	No access
Schedule	Generate / change	View / acknowledge	View assignment	Published view
Live scoring	Monitor / approve	View	Record score / stats	Live view
Backup / audit	Manage / review	No system backup	No system backup	No access

Notification checkpoints

Schedule publication; time, venue, or court changes; 30-minute reminders; eligibility status; and official final result. Schedule-change notices are tracked for Coach acknowledgment.

Privacy boundary

PSA/Birth Certificate, Parent Permit, exact birth dates, guardian contacts, receipts, and internal audit details never appear on public pages.

04 / RECOVERY & READINESS

Game-day safety when technology fails

1

Run the readiness checker

Verify public pages, API health, all three demo roles, a recent verified backup, and critical API routes.

2

Keep a signed paper score sheet

When connectivity fails, stop tapping. Record the last confirmed event, period, clock, and totals on paper.

3

Reconnect before resuming

Reload the assigned game and compare the scoreboard with the paper sheet. Use authorized corrections and retain the audit reason.

4

Use the prepared XAMPP fallback

If the main server fails, start the local fallback and follow the database administrator restore procedure using the latest verified backup.

5

Close the day safely

Export schedules, scores, standings, eligibility, and payments; create a new backup; and copy it to two separate storage locations.

GAME-DAY RULE

The paper score sheet is the temporary source of truth during an outage. FullCourt becomes authoritative again only after Admin reconciles and confirms the restored record.
