FULLCOURT

One court.
Every game.

Three-role basketball tournament management system

Defense flow, acceptance evidence, and deployment readiness

DEFENSE EDITION / OCTOBER 2026

System objective

FullCourt centralizes tournament setup, coach-managed rosters, document review, automated bracket and scheduling, Staff Admin scoring, notifications, standings, awards, and a public Game Center. Players do not maintain accounts; they exist as roster records managed by their Coach.

USER	PRIMARY RESPONSIBILITY	BOUNDARY
Admin	Creates and publishes tournaments; reviews eligibility; manages schedule, staff, incidents, and final scores.	Only Admin controls tournament structure and official finalization.
Coach	Creates the team roster up to 15 players; uploads PSA/birth record and parent permit; follows schedules and alerts.	Cannot operate live scoring or approve eligibility.
Staff Admin	Accepts an assigned game; confirms lineups; records team score and individual points; submits the final score.	Rebounds and assists are optional. Admin confirms the result.
Public	Views Game Center, daily schedule, bracket, standings, game details, and published results.	No login and no operational write access.

Current readiness

Frontend and API run locally through Vite and PHP/MySQL or XAMPP. Daily verified backups, audit history, scoring device lock, offline retry safeguards, and responsive role workspaces are included.

01 / END-TO-END FLOW

From tournament creation to public result

The official path follows one source of truth. Each role receives only the controls needed for its responsibility.

1	**Admin creates tournament** Format, dates, one primary venue/court, availability, and publish state.
2	**Admin registers teams** Assign Coach, division, colors, and roster deadline.
3	**Coach builds roster** Up to 15 player records; jersey, position, birth date, guardian contact.
4	**Coach submits documents** PSA/birth record and parent permit. Possible duplicate and birth-date mismatch warnings are flagged.
5	**Admin verifies eligibility** Approve or reject with remarks; lock rosters before competition.
6	**System generates bracket** Single or double elimination creates the official match path.
7	**System optimizes schedule** Court availability, team clashes, rest, and venue constraints are checked before publishing.
8	**Admin assigns Staff Admin** Staff receives an in-app assignment and game reminder.
9	**Staff records the game** Confirm lineups; official team score and individual points; optional rebounds/assists.
10	**Admin confirms final** Bracket, standings, public game details, and award recommendations update.

02 / ROLE WORKFLOWS

What each user demonstrates during defense

ADMIN

- Open Priority Queue
- Create and publish tournament
- Review documents and eligibility
- Generate bracket and schedule
- Assign Staff Admin
- Confirm final score and monitor incidents

COACH

- Open readiness checklist
- Manage up to 15 roster records
- Upload required documents
- Resolve missing or mismatched records
- Receive schedule-change alert
- View team schedule and reports

STAFF ADMIN

- Accept game assignment
- Confirm starting lineups
- Record score and player points
- Use undo for correction
- Submit final score
- Wait for Admin confirmation

Public experience

The public website exposes only approved information: tournament cards, teams, complete daily schedule, bracket, standings, live score, player box score, and final result. It never exposes private eligibility documents, guardian details, access PINs, or operational controls.

EVENT	RECIPIENT	RESULT
Schedule/time/venue change	Coach	Urgent inbox item with direct game/schedule link
Staff assignment	Staff Admin	Action-required notification and assignment workflow
Eligibility decision	Coach	Approved or rejected status with Admin remarks
Game reminder	Coach and assigned staff	Reminder before the scheduled game
Final result	Public and authorized users	Updated Game Center, bracket, standings, and awards data

03 / ACCEPTANCE EVIDENCE

Verified system behavior

Automated and browser-driven checks were run against the local FullCourt frontend and API.

AREA	VERIFIED RESULT	STATUS
Tournament creation	Mobile create flow, one selected court, saved availability, tournament created (HTTP 201).	PASS
Roster controls	15-player cap, duplicate guard, roster lock/unlock, Coach-only roster management.	PASS
Documents	Birth record and parent permit upload, Admin verification, mismatch metadata.	PASS
Bracket and schedule	Bracket generated, schedule created, conflict checks executed, publication supported.	PASS
Secure scoring	Six-digit PIN, device lock blocks a second device, clock and quarter persist.	PASS
Player scoring	Individual made basket updates team score and player box score.	PASS
Finalization	Staff submission waits for Admin; Admin confirmation publishes the completed result.	PASS
Notifications	Coach schedule/status notification dispatched; filters and Today/Earlier grouping tested.	PASS
Responsive UI	Admin, Coach, Staff Admin, Game Center, Schedule, and scoring console tested without overflow.	PASS
Code quality	Frontend lint/build clean; PHPStan level 5 reports zero errors.	PASS

Important validation boundary

FullCourt can calculate age, compare entered and document birth dates, detect likely duplicate roster records, and flag suspicious mismatches. It cannot guarantee that a PSA or birth certificate is authentic. Final document authenticity remains an Admin manual-review responsibility.

04 / DEFENSE DEMONSTRATION

Recommended 8-10 minute live script

00:00-01:00	**Public**	Open Game Center and Daily Schedule; explain no account is required.
01:00-03:00	**Admin**	Open Priority Queue, create/view tournament, show venue/court, bracket, and schedule.
03:00-05:00	**Coach**	Open team readiness, show 15-player roster, document status, next game, and notification inbox.
05:00-07:30	**Staff Admin**	Open assignment, scoring console, player selection, add points, optional stats, and undo.
07:30-09:00	**Admin**	Confirm final score; show updated bracket, standings, and Player of the Game recommendation.
09:00-10:00	**Public**	Refresh public game details to prove the final result was published.

Demo accounts

ROLE	EMAIL	PASSWORD
Admin	platform.admin@fullcourt.local	FullCourt2026!
Coach	demo.coach01@fullcourt.local	FullCourt2026!
Staff Admin	demo.staffadmin01@fullcourt.local	FullCourt2026!

Use demo credentials only on the local defense environment. Replace all passwords before any real deployment.

05 / DEPLOYMENT CHECKLIST

November event readiness

Use this checklist before the defense and again before the live tournament.

1	Run XAMPP/MySQL and PHP API; confirm frontend and API health endpoints.	[ ]
2	Use only the three supported account roles: Admin, Coach, Staff Admin.	[ ]
3	Remove obsolete Player and Organization demo accounts from presentation data.	[ ]
4	Verify each team has no more than 15 active roster records.	[ ]
5	Confirm PSA/birth record and parent permit status before roster lock.	[ ]
6	Publish the bracket and conflict-free schedule before assigning staff.	[ ]
7	Test one scoring link, PIN, device lock, undo, refresh recovery, and Admin finalization.	[ ]
8	Verify Coach receives a schedule-change notification.	[ ]
9	Run and inspect the daily verified backup; perform at least one restore drill.	[ ]
10	Keep a printed scoring sheet and manual incident log as event-day fallback.	[ ]

Event-day fallback sequence

1. Preserve the current score on paper. **2.** Pause the game clock in FullCourt if reachable. **3.** Restore network/API service. **4.** Reopen the same scoring device session. **5.** Reconcile the event log and paper score before continuing. **6.** Admin records an incident and confirms the final score.

Defense conclusion

FullCourt reduces fragmented tournament work into one auditable basketball operations flow. The final design keeps authority clear: Admin controls official competition data, Coach owns roster preparation, Staff Admin records the game, and the public follows verified results.
